

Medical Design Forum

Do No Harm: Caring for People
Caring for the Planet

February 6 - 7

2 Days

10 LU (HSW)

This year's Medical Design Forum presents two days of interdisciplinary presentations, design case studies and engaging conversations about how to address the magnitude of the climate crisis while meeting regulatory requirements aimed at ensuring a safe and healthy environment for patients. What are the obstacles to achieving sustainability goals in healthcare environments, and how can design teams, owners, providers and communities respond? What are the policies and processes that support high performance building strategies? What is driving innovation in community healthcare, rural communities, and urban organizations right now, and what can we expect next? We invite AEC and healthcare professionals to join us in exploring actionable solutions for better care—for people and the planet.

+ Stay tuned for info on related Architecture for Health Committee's May and November day long programs, each with 6 HSW

Cracking Codes

February 20 · April 29
July 23 · September 23
November 4

5 Half-Days

4 LU (HSW) per session

This year's series will include 5 half-day sessions that explore a variety of codes-related topics. Each year, codes experts determine the most relevant topics to focus on, including recent local code updates, existing building requirements, accessibility, and compliance issues and implications.

- **February 20** | Updates to the 2018 International Fire Codes
- **April 29** | Commercial Energy Code Update
- **July 23** | Back to the Future-IBC Code Updates including Occupied Roofs
- **September 23** | Know What You Don't Know About Residential Code- 2018 IRC Update with Energy Code and ADU/DADu
- **November 4** | Code 101- Beginners guide to using the code: What are the I codes?

Getting It Done

The *Art* of Project Management

March 4 · April 1
May 6 · June 3

4 Full Days

24 LU

This revised 4-part project management series is tailored to reflect the deep interdisciplinary collaboration that distinguishes architectural practice in our region. Getting it Done: The Art of Project Management will focus on the 'secret sauce' of successful project management: Communication, Collaboration and Client Care. Each moderated course will convene local experts—architects, engineers, contractors, owners and other industry voices—to present content and participate on interactive panel discussions. Designed for cohort-based learning with architects, engineers and contractors at a variety of project management experience levels, the series will include time for peer to peer knowledge sharing at tables, Q&A with speakers, and networking.

CLASS PASS For AIA Seattle's major education forums, Class Pass will give your firm 10% off the Early Bird rate for bulk registrations of 10+ employees.

Action Now

Accelerating Pathways
to Decarbonization

April 21

Full Day

7 LU (HSW)

For many years, our focus as a professional association has been on reducing or eliminating operating carbon from new buildings. The significant scale and urgent timeframe of our climate crisis demand interventions that are broad and immediate, and that recognize decarbonization is directly correlated to health, safety, and equity in our communities. What are the data-driven interventions that will pay the highest dividends immediately, and what will position us to stay on the path to 2030 targets and net-zero 2050? What are the regulatory and financial frameworks necessary to support this scale and urgency?

In this year's thought leadership summit, we will explore high-impact actions in policy and practice that make actionable differences in atmospheric carbon over the next 5 years, looking specifically at:

- Reducing embodied carbon in new construction, including the construction process
- Electrification of buildings
- Retrofitting existing buildings

Housing Design Forum

Single Family Homes

June 8

Full Day

1 LU (HSW)

The annual Housing Design Forum explores design trends, regulations, practice innovations, and demographic changes that impact professionals designing homes in the Pacific Northwest. "This year's forum will explore inspiring single-family homes and investigate innovations in residential design practice. As cities explore new paradigms for neighborhoods, how are architects problem-solving through design, collaborating with industry partners against cost challenges, and elevating the value of design on projects of all scales and budgets?"
